

Benedict O. Barcebal

Full-Stack Software Engineer | Scalable Systems | Cloud Infrastructure | API Architecture

Makati City, Philippines | 09993370186 | bentf24@gmail.com | [GitHub](#) | [Portfolio](#)

Professional Impact

Full-stack software engineer with a strong track record of solving high-impact technical problems in production environments. Specializes in real-time systems, high-concurrency workloads, cloud-based processing pipelines, and performance optimization. Consistently delivers solutions that improve reliability, scalability, and operational efficiency across business-critical platforms.

Core Technologies

Languages: TypeScript, JavaScript, PHP, Python

Frontend Engineering: React, Next.js, Tailwind CSS, SCSS, Styled Components, Bootstrap, Vite, Webpack, jQuery, Ajax, Alpine

Backend and APIs: Laravel, REST APIs, OAuth, API Integration, Scalable Architecture

Cloud and Infrastructure: AWS EC2, IAM, Linux, CI/CD, GitHub Actions, GitLab CI, Cron Automation, Batch Processing

Databases: MySQL, PostgreSQL, Query Optimization, Indexing, Normalization, Performance Tuning

Security: JWT, Laravel Sanctum, CSRF, CORS, XSS and SQL Injection Prevention, Secure Authentication

AI Tooling: OpenAI, Claude, Gemini, PyTorch

Developer Stack: Git, GitHub, GitLab, VS Code, Termius, TablePlus, Jira, ClickUp, Trello

Professional Experience

CF Outsourcing Solutions

Full-Stack Software Engineer | Nov 2025 - Present

- **Designed and delivered a Twilio-based patient engagement platform** that automated appointment reminders, reduced missed appointments, and eliminated manual outreach workflows.
- **Built an RCM workload distribution system** that optimized task allocation across teams and improved overall operational throughput.
- Provisioned AWS EC2 infrastructure to process datasets exceeding **700,000+ records** while maintaining application stability.
- Implemented cron-driven batch pipelines to prevent server overload and enable safe large-scale imports.
- Resolved systemic database bottlenecks by eliminating N+1 queries and applying indexing strategies, significantly improving data processing speed.

Coding Collective

Backend Developer | Jul 2024 - Nov 2025

- **Solved real-time concurrency challenges** caused by high volumes of simultaneous user actions by redesigning backend request handling and database interactions.
 - **Reduced server bottlenecks** by introducing optimized query patterns, indexing strategies, and controlled write operations during peak activity.
 - **Implemented batch processing and scheduled jobs** to safely handle transactional updates without blocking real-time user flows.
 - Improved system stability and responsiveness during high-traffic periods by strengthening backend architecture.
-

Intellect Philippines

Software Developer | Feb 2024 - Jul 2024

- **Delivered production-ready online platforms** that supported business operations and end users at scale.
 - Stabilized and modernized legacy systems, reducing technical debt and improving maintainability.
 - Built configurable admin dashboards that improved visibility and control for non-technical stakeholders.
 - Contributed to faster feature delivery and improved application reliability.
-

Erovoutika International Corp.

Lead and Full-Stack Developer | Sept 2022 - Sept 2023

- **Led development of Eira Academy**, an examination and certification platform used to assess learners and automatically issue certificates upon completion.
- Designed secure exam workflows, result processing, and certificate generation pipelines.
- Built centralized dashboards to manage users, exams, payments, and academic data.
- Launched and maintained production systems with strong uptime and operational reliability.

Education

Bachelor of Computer Science, Major in Application Development - University of Makati | 2018-2023
